

Kentucky Diamond Breeding Stock

Dominant strain is "Kentucky Diamond" bred exclusively for the White Dove Release industry

Breeding stock selected for the following Breeding Goals

Small well balanced bird with a small short beak and very little wattle, projecting horizontal to floor and points straight ahead much like a song bird. The head is round with a friendly face and with all features tending toward a soft feminine look. Legs are short with no feathers on legs. Tail carriage off the floor/ground , for cleanliness and minimal tail feather damage from wire floors,. Am also selecting birds with tight vents as this is a desirable trait sought after by the racing community. Generally there is one feather centered over the tail feathers and the tail is more narrow.*

Through our vigorous performance screening we have birds with excellent homing abilities, along with desirable traits described as stamina, a lot of heart and desire to fly home.

All offspring is through caged breeding pairs to guarantee parentage.

All available mature birds will have a guarantee of sex determination.

SAVE, As small homers ,they eat less feed, and with their superb homing skills, you'll experience less bird losses, in fact, what you will find is, IT ACTUALLY PAYS TO OWN A KENTUCKY DIAMOND.

Proven breeders are randomly offered starting at \$25 per bird with a minimum of 2 birds. Buyer must pay for shipping container and shipping costs. Minimum order of 4 birds. Buyer to pay for shipping and container. 50% down with order.

Young offspring will be also be offered for \$25 per bird thru prepaid orders, after which we will hatch your order. No sex determination will be made on young birds. Minimum order of 4 birds. Buyer to pay for shipping and container.

**Disclaimer: Although these are my breeding objectives, I am seeking to create this type of bird. I have no birds that meet all of the above descriptive traits. As a breeder, I am trying to meet my goal with each new generation of offspring. Any questions feel free to call.*
